```

Question-1

Count and print the number of PERSON, LOCATION AND ORGANIZATION in the given sentence

In [8]:
```
person_entities = []
location_entities = []
organization_entities = []

for node in ne_tree:
    if isinstance(node, nltk.tree.Tree):
        if node.label() == "PERSON":
            person_entities.append(' '.join([child[0] for child in node]))
        elif node.label() == "LOCATION":
            location_entities.append(' '.join([child[0] for child in node]))
        elif node.label() == "ORGANIZATION":
            organization_entities.append(' '.join([child[0] for child in node

print("Number of PERSON entities:", len(person_entities))
print("PERSON entities:",person_entities)
print("\n")
print("Number of LOCATION entities:",len(location_entities))
print("LOCATION entities:",location_entities)
print("\n")
print("Number of ORGANIZATION entities:",len(organization_entities))
print("ORGANIZATION entities:",organization_entities)
```

```
Number of PERSON entities: 2
PERSON entities: ['Rajkumar', 'Loretta E. Lynch']

Number of LOCATION entities: 0
LOCATION entities: []

Number of ORGANIZATION entities: 1
ORGANIZATION entities: ['WASHINGTON']
```

Question-2

Observe the results. Does named enity,"police officers" get recognized ?

In [9]:
```
word = nltk.word_tokenize(Sentence1)
pos_tag = nltk.pos_tag(word)
chunk = nltk.ne_chunk(pos_tag)
grammar = "NP: {<NN><NNS>}"
cp = nltk.RegexpParser(grammar)
result = cp.parse(chunk)
NE = [ " ".join(w for w, t in ele) for ele in result if isinstance(ele, nltk.
print (NE)
```

```
['Rajkumar', 'WASHINGTON', 'New York', 'police officers', 'Loretta E. Lync
h', 'Brooklyn']
```

Write a regular expression patter to detect this. You will need nltk.RegexParser class to define pattern and parse terms to detect patterns.

In [10]:
```
grammar = "NP: {<DT><JJ>*<NN>}"
cp = nltk.RegexpParser(grammar)
result = cp.parse(chunk)
NE = [ " ".join(w for w, t in ele) for ele in result if isinstance(ele, nltk.
print (NE)
```

```
['Rajkumar', 'WASHINGTON', 'the wake', 'a string', 'New York', 'Loretta E. L
ynch', 'the top federal prosecutor', 'Brooklyn', 'the pain', 'a broken trus
t', 'the responsibility']
```

Question-3

Does the named entity,"the top federal prosecutor" get recognized ?

In [11]:
```
parse = cp.parse(tags)
print(parse[:])
```

```
[('Rajkumar', 'NNP'), ('said', 'VBD'), ('on', 'IN'), ('Monday', 'NNP'), ('th
at', 'IN'), ('WASHINGTON', 'NNP'), ('--', ':'), ('In', 'IN'), Tree('NP',
[('the', 'DT'), ('wake', 'NN')]), ('of', 'IN'), Tree('NP', [('a', 'DT'), ('s
tring', 'NN')]), ('of', 'IN'), ('abuses', 'NNS'), ('by', 'IN'), ('New', 'NN
P'), ('York', 'NNP'), ('police', 'NN'), ('officers', 'NNS'), ('in', 'IN'),
('the', 'DT'), ('1990s', 'CD'), (',', ','), ('Loretta', 'NNP'), ('E.', 'NN
P'), ('Lynch', 'NNP'), (',', ','), Tree('NP', [('the', 'DT'), ('top', 'JJ'),
('federal', 'JJ'), ('prosecutor', 'NN')]), ('in', 'IN'), ('Brooklyn', 'NN
P'), (',', ','), ('spoke', 'VBD'), ('forcefully', 'RB'), ('about', 'IN'), Tr
ee('NP', [('the', 'DT'), ('pain', 'NN')]), ('of', 'IN'), Tree('NP', [('a',
'DT'), ('broken', 'JJ'), ('trust', 'NN')]), ('that', 'IN'), ('African-Americ
ans', 'NNP'), ('felt', 'VBD'), ('and', 'CC'), ('said', 'VBD'), Tree('NP',
[('the', 'DT'), ('responsibility', 'NN')]), ('for', 'IN'), ('repairing', 'VB
G'), ('generations', 'NNS'), ('of', 'IN'), ('miscommunication', 'NN'), ('an
d', 'CC'), ('mistrust', 'NN'), ('tell', 'NN'), ('to', 'TO'), ('law', 'NN'),
('enforcement', 'NN'), ('.', '.')]
```

Write a regular expression pattern to detect this.

In [12]:
```
grammar = "NP: {<DT><JACJ>*<NN>}"
cp = nltk.RegexpParser(grammar)
result = cp.parse(chunk)
NE = [ " ".join(w for w, t in ele) for ele in result if isinstance(ele, nltk.
print (NE)
```

```
['Rajkumar', 'WASHINGTON', 'the wake', 'a string', 'New York', 'Loretta E. L
ynch', 'Brooklyn', 'the pain', 'the responsibility']
```

Exercise-2

In [13]:
```
Sentence2="European authorities fined Google a record $5.1 billion on Wednesda
```

Question-1

Observe the Output. Does your code recognize the NE shown in BOLD

In [14]:
```
token=word_tokenize(Sentence2)
tag=nltk.pos_tag(token)
ne_tree=ne_chunk(tag)
print(ne_tree[:])
```

```
[Tree('GPE', [('European', 'JJ')]), ('authorities', 'NNS'), ('fined', 'VB
D'), Tree('PERSON', [('Google', 'NNP')]), ('a', 'DT'), ('record', 'NN'),
('$', '$'), ('5.1', 'CD'), ('billion', 'CD'), ('on', 'IN'), ('Wednesday', 'N
NP'), ('for', 'IN'), ('abusing', 'VBG'), ('its', 'PRP$'), ('power', 'NN'),
('in', 'IN'), ('the', 'DT'), ('mobile', 'JJ'), ('phone', 'NN'), ('market',
'NN'), ('and', 'CC'), ('ordered', 'VBD'), ('the', 'DT'), ('company', 'NN'),
('to', 'TO'), ('alter', 'VB'), ('its', 'PRP$'), ('practices', 'NNS')]
```

Write a regular expression that recognizes the entity,"$5.1 billion"

In [15]:
```
word = nltk.word_tokenize(Sentence2)
pos_tag = nltk.pos_tag(word)
chunk = nltk.ne_chunk(pos_tag)
grammar = "NP: {<CD>}"
cp = nltk.RegexpParser(grammar)
result = cp.parse(chunk)
NE = [ " ".join(w for w, t in ele) for ele in result if isinstance(ele, nltk.
print (NE)
```

```
['European', 'Google', '5.1', 'billion']
```

Question-2

Write a regular expression that recognizes the entity,"the mobile phone" and similar to this

entity such as "the company"

In [16]:
```
word = nltk.word_tokenize(Sentence2)
pos_tag = nltk.pos_tag(word)
chunk = nltk.ne_chunk(pos_tag)
grammar = "NP: {<DT><JJ>*<NN>}"
cp = nltk.RegexpParser(grammar)
result = cp.parse(chunk)
NE = [ " ".join(w for w, t in ele) for ele in result if isinstance(ele, nltk.
print (NE)
```

```
['European', 'Google', 'a record', 'the mobile phone', 'the company']
```

Exercise-3

In this exercise, you will extract all ingredients from the food recipes text files, "food_recipes.txt".

In [18]:
```
f=open("recipe.txt")
s=f.readlines()
```

In [19]:
```
s
```

Out[19]:
```
['1 1/2 cups dry *red wine*\n',
 '3 cloves *garlic*\n',
 '1 3/4 cups *beef broth*\n',
 '1 1/4 cups *chicken broth*\n',
 '1 1/2 tablespoons *tomato paste*\n',
 '1 *bay leaf*\n',
 '1 *sprig thyme*\n',
 '8 ounces *bacon* cut into 1/4 inch pieces\n',
 '1 tablespoon *flour*\n',
 '1 tablespoon *butter*\n',
 '4 1 inch *rib-eye steaks*\n',
 '1 tablespoon *bourbon whiskey*']
```

In [20]:
```
import re
with open("recipe.txt") as f:
    s = f.read()
bold_pattern = r'\*([^*]+)\*'
bold_words = re.findall(bold_pattern, s)
for word in bold_words:
    print(word)
```

```
red wine
garlic
beef broth
chicken broth
tomato paste
bay leaf
sprig thyme
bacon
flour
butter
rib-eye steaks
bourbon whiskey
```

In [ ]:
```

```
